(\*1) Varies according to the quality of the camera and LCD performance of your smartphone on a table.

Product:	LEYE (6L-6L)	Model:	TB-14092LEN
Magnification:	From 30x to 100x (*1)	Magnification lens:	f3 ball lens (BKT)
Focal length:	About 2.2 mm	Attachment mode:	Magnetic
Product size:	20 mm x 65 mm x 3 mm	Case size:	58.5 mm x 124 mm x 6 mm

### Specification

The camera and the magnification lens light sources of the devices used in these photographs are not digital.

### Leye photographs

# Leye

## L-eye Smartphone Microscope User Guide

- Read the user guide carefully.  
Use the product safely.
- Before using the product be sure  
to read the warnings and cautions  
listed on p.1.

1

Do not touch the lens surface or put thin things on it. Scratches that enter the lens may be dislodged if a strong force is exerted on it. Also, the lens may be disturbed if the lens will interfere with microscopic images. Keep the product in the case if no rubber pads are used. Any contact, scratch, or contamination of the lens will compromise the image. Do not apply strong force to the lens or body of the product, the sample plate or the case. There is a risk of damage or deformation.

Do not move or place the product on mobile devices without the permission of the manufacturer. And will invalidate the warranty.

Placing objects on top of the product may cause damage or deformation.

Do not store the product in a room temperature.

This product was not intended to be used for medical, nuclear, aerospace and military purposes that require the highest levels of safety and reliability. The company is not liable for any harm resulting from this product use.

This product should not be used for any accidents or disabilities, due to incorrect use of the product.

### Cautions

Take care not to scratch the glass of the mobile device screen of cameras.

Do not touch the product on the product.

Do not move or place the product on mobile devices without the permission of the manufacturer. And will invalidate the warranty.

Do not touch the product with hands. Any impacts that damage the plates or the glass when handling.

The sampling plates of the product are made of organic glass and very thin material. Do not swallow or inject the product. This can cause injury.

If the product is damaged, do not continue use immediately.

Take adequate precautions when sampling objects near water, in high places and in forests.

If broken parts can cause injury.

Accidental ingestion of the product can cause injury.

Keep the product away from children to prevent injury or death.

Do not throw, drop or swing the product around. This may damage the product, the mobile device or the floor.

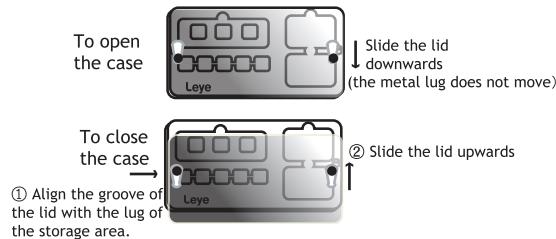

Do not use this product to injure myself at strength such as (smartphones, tables etc.) and cause fires and burns.

Do not use, leave sunlight or store this product in direct sunlight or under a strong light. This can damage mobile devices cameras or under a strong light. This can damage mobile devices cameras.

### Warnings

## Operating Instructions

### Opening and closing the case

### Method of Observation

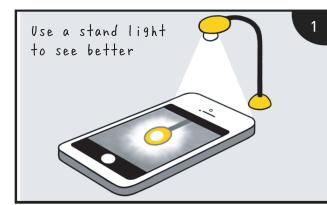

1. Remove L-eye from the case.
2. Peel off the protective film from the fixed rubber pads.
3. Place L-eye on a flat surface mobile device (such as a smartphone, tablet), and select the front camera shooting mode.
4. Under the light source; While looking at the mobile device screen, place L-eye, and align ball lens with the camera position. Press the rubber pads to attach to the mobile device. ...P④—2
5. Place the sample object on the transparent part of the sampling plate. ...P④—3
6. Place the metal part of the sampling plate on top of the L-eye magnet. Steps 5. and 6. can be in either order. ...P④—3

Using the righthand magnet for solid samples and the lefthand magnet for liquid samples makes focusing easier. ...P④—4

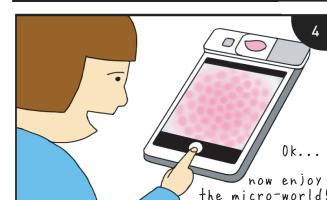

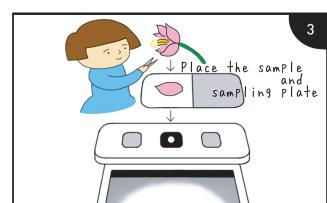

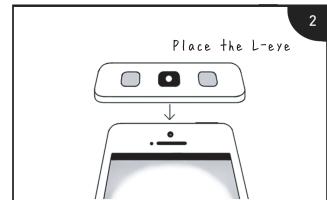

7. Observe, and take your picture(s).

See the video for more details. →

## Trouble shooting

- I can't mount L-eye to the mobile device.
  - ◆ Fixed rubber pads are attached to the back surface of the L-eye. Peel off the protective film from the fixed rubber pads, and press them lightly to the mobile device. Change the position of the rubber pads should match the mobile device.
  - ◆ L-eye is not fixed the mobile device, when the fixed rubber is dirty, peel it off, rinse with water, dry and fix it back on the L-eye. or replace with a spare rubber
  - ◆ If you are unsure about the mounting position while watching the screen of the mobile device, adjust the centre of the ball lens till it comes to the centre of the screen.
  - ◆ If there is a raised mounting around the mobile device's camera and the fixed rubber pads will not attach to the mobile devices, use the spare rubber pads in a stack.
- I can't see the image well?
  - ◆ Adjust the lighting.  
Try using a small LED light source.
  - ◆ If the ball lens or the sampling plate is dirty,  
→Wipe the sampling plate gently with a soft cloth or wash with water; dry off all water droplets.  
→Use a hair-dryer to blow off dust particles, wash and dry off water droplets.  
→If stubborn dust remains on the lens, wipe the surface of the L-eye gently with a cotton swabs or spectacles cleaning cloth.
- The image is not focused.
  - ◆ Try changing the distance between the sample and the lens.  
→The heights of the magnets on left and right differ so the placing of the sampling plate on left or right affects the focus.  
→Focus can be easily adjusted according to the type of sample: solid objects on the righthand side with the thick magnet, and liquid objects on the lefthand side with the thin magnet.  
→Find the right position for the sample by delicately pressing the sample onto the sampling plate or lifting it.  
→A solid sample, if not firmly attached, may result in a blurred image; if necessary, press the part of the sample you want to see firmly onto the plate.
